

Course Manual of Master's Degree Programme Scientific Instrumentation

The Department of SciTec

With nearly one thousand students, a total of 18 professors, about 25 academic and technical collaborators, the Department of SciTec is the largest of its kind at this university. The name **SciTec** stands for the link between **science** and **technology**. The subtitle "Precision, Optics, Materials" names the focal points in its teaching and research. The Department of SciTec was founded in 2005 from the former Precision Engineering, Physics Engineering and Materials Engineering Departments. This merger has produced a new engineering science entity with a wide-ranging spectrum of scientific and technical expertise and well-equipped modern laboratories. The working fields of the department are: teaching, research and further education.

Teaching:

The Department of SciTec offers the following degree programmes:

Bachelor degree programmes

- Laser- and Optotechnologies
- Materials Engineering
- Microtechnology/ Physics Engineering
- Optometry/ Ophthalmic Optics
- Optometry (part-time)
- Precision Engineering

Master degree programmes

- Clinical Optometry (part-time)
- Laser- and Optotechnologies
- Materials Engineering
- Optometry/ Ophthamo-Technology/ Vision Science
- Scientific Instrumentation

Research:

The focal points of research projects operated at the Department of SciTec can be described with the following key words:

- laser technique and optics
- materials science
- optometry
- precision and micro technologies

Further education:

The Department of SciTec offers further education in special fields (i.a. optometry, production engineering, laser technique, optics, optical design) for industrial establishments.

International contacts:

The Department of SciTec maintains contacts to universities all over the world. Numerous students use this chance to complete a part of study abroad (U.S.A., France, Japan, China, Australia etc.). Numerous international students are enrolled in the master programme „Scientific Instrumentation“, which is taught in English.

The Master's degree programme Scientific Instrumentation

The international Master's degree programme of Scientific Instrumentation taught in English language is designed for graduates in science and engineering disciplines and provides advanced qualification for employment in the research and development branches of various fields. Building on the competence acquired during the Bachelor's degree programme, the course of study enables students to independently design and develop scientific instruments and manage development and research projects.

Scientific instruments are highly specialized devices for measuring physical or chemical quantities, carrying out special processes or creating defined test conditions. These instruments are used in fields that include research in physics and sciences, advanced technology, biomedical engineering, and aeronautics.

Jena's reputation as a centre of technology specializing in optics and scientific instrument manufacturing dates back over a hundred years. Industrial firms and research institutes are engaged in the fields of applied physics, technologies in the field of physics, optics, high-precision mechanics, metrology, sensors, micro-engineering and nanotechnology, as well as biomedical engineering. The development of high-tech processes, of innovative measuring techniques and instruments is crucial for this sector to remain globally competitive.

Employment opportunities

The Master's degree in Scientific Instrumentation qualifies its holders for the employment in industry, research institutes and engineering firms. Holders of the Master's degree mediate between pure science and engineering disciplines and consequently apply scientific knowledge to find appropriate, effective solutions to engineering problems.

Typical examples of employment opportunities in industry and research institutes can be found in the research and development of new instrumentation, in monitoring high-tech processes, as well as in solving metrological problems and problems relating to the technical aspects of instruments arising in interdisciplinary research projects, such as biomedical engineering, geotechnics, environmental engineering and the aerospace industries.

Entrance Requirements

The entry requirement for the Master's degree programme is a university degree with competent final degree grades in physics, science or a scientific engineering discipline whose curriculum covers the subject entry requirements (e.g. physics, physics engineering, microtechnology, precision engineering, mechanical engineering, mechatronics, electrical engineering, electronics). English proficiency is also mandatory.

The postgradual basis modules in semester one are assigned to the students depending on their Bachelor course to bring all the students with their different background to a comparable level.

The Master's degree programme is offered at every winter semester.

Programme overview

The programme has been designed to equip students with both the technical and interdisciplinary qualifications necessary for the successful pursuit of their future careers.

Apart from contents of the course in physics and engineering science, this also includes the so-called key qualifications. In the first semester in addition to the compulsory modules a selection of postgradual basis modules in the fields of applied physics or precision engineering is offered to bring students from different disciplines up to the same level. In the second semester, students select four fields of specialization from a choice of eight (see next page).

Graduation

The internationally recognized academic degree of **Master of Science (M.Sc.)** will be conferred on students by the Ernst-Abbe-Hochschule Jena – University of Applied Sciences Jena, upon successful completion of the programme.

Professional perspectives

In the actual scenario of the increasing shortage of highly qualified personnel in technical and scientific sectors, there are excellent career prospects for graduates of the Master's degree programme in scientific instrumentation both nationally and internationally.

The industries and research institutes in the region of Jena provide excellent employment opportunities for graduates in the particular specializations which they have opted for. Many companies are engaged into the fields of metrology and sensors, optics, analytical techniques, micro engineering and medical engineering. The close contacts that the teaching staff possesses with the industrial firms and research institutes ensure that the training is practically oriented and is up-to-date with the course contents. Looking at the current scenario for interns and graduates of the scientific engineering courses, the demand is greater than the supply. The Master's degree in Scientific Instrumentation also qualifies its holder to pursue a PhD.

Contact person

For any specific question on the **Master's degree programme Scientific Instrumentation** please contact Mr Prof. Dr. Gerbach (**course director/ study programme advisor**):

Prof. Dr. Ronny Gerbach

Module descriptions

In this chapter you will find all module descriptions of **Master's study programme Scientific Instrumentation** in chronological order of curriculum.

Following **module table** gives an overview of curriculum according to Study and Examination Regulations (Programme Specific Regulations) from 16.07.2021 (**EP-version 41**).

The full text of **Programme Specific Regulations** you will find in the **Official Journal of Ernst-Abbe-Hochschule Jena** (University of Applied Sciences) in issue number 75, on the **webpage** (www.scitec.eah-jena.de) under Downloads or in the **intranet** (meine.eah-jena.de/scitec).

Department	SciTec
Degree programme	SI
Module name	Solid State Physics
Module number	SciTec.2.197
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	N.N.
Module content	Bindings in solid materials, crystalline structure and crystallographic systems, diffraction and reciprocal lattice, Brillouin-zone, lattice vibrations, thermal properties, electron gas and band structure, semiconductors, superconductivity, dielectric properties of materials, ferroelectricity, magnetic properties.
Learning objectives	After completion of this module the students have a comprehensive understanding of the fundamental properties of condensed matter and of the essential experimental techniques. The students are able, to use the acquired relations and laws qualitatively and quantitatively to execute problems in the field of solid-state physics.
Course type (lecture, seminar, exercises, practical course)	3 L – 0 S – 1 E – 0 P
Recommended literature	<ul style="list-style-type: none"> ▪ C. Kittel: Introduction to Solid State Physics (John Wiley & Sons, 2004) ▪ H. Ibach, H. Degree programme	SI
Module name	Quality Management
Module number	SciTec.2.245
Study and Examination Regulations	ER-version 41 (of 16.07.2021)
Compulsory/ required elective/ optional module	required elective module
Module coordinator	Prof. Dr. Ronny Gerbach
Module content	Knowing tools of quality management is the basis for a successful business activity on the market. The combinations of the individual tools help to achieve an optimal result for the company and to enable a targeted search for weak points. Error prevention and optimization are important processes for running a business
Learning objectives	Passing this module, the students are able to apply of quality management systems, quality function development (QFD), optimization (DOE) through genetic algorithms, development strategy, partial factorial design plans (Taguchi), benchmarking, quality costs, fault tree analysis, process capability, Pareto technique.
Course type (lecture, seminar, exercises, practical course)	3 L – 0 S – 0 E – 0 P

Learning materials	Script, worksheets, application information
Method(s) of instruction/ media being used	Lecture in connection with internship, handling and training of management techniques, presentation technique
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	winter term
Which semester during the programme	3
Requirements for attendance, necessary knowledge	Mathematical knowledge in the field of statistics and probability calculus, safe handling of ready-to-use software
Assessment (written/ oral test, paper, etc.)	written examination (90 minutes)
ECTS credits	3
Work load in:	90 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 45 h of presence at university ▪ 45 h of self-study
Usability of this module	Professional Practice
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule
Language(s)	English

Department	SciTec
Degree programme	SI
Module name	Scientific Writing and Presentation
Module number	SciTec.2.246
Study and Examination Regulations	ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory module
Module coordinator	Prof. Dr. Ronny Gerbach, Nancy Reichel
Module content	<ul style="list-style-type: none"> ▪ Scientific Writing ▪ Presentation of a scientific work ▪ Research scientific topics ▪ Software for scientific purposes (proprietary, free) ▪ Good scientific practice
Learning objectives	After completion of this module the students are able to understand the necessity of a scientific approach to working, writing and presenting. The students can deduce and apply the techniques of scientific writing and communication.
Course type (lecture, seminar, exercises, practical course)	1 L – 2 S – 0 E – 0 P
Recommended literature	<ul style="list-style-type: none"> ▪ R.E. Berger: A Scientific Approach to Writing for Engineers and Scientists, Wiley, 2014 ▪ M. Alley: The Craft of Scientific Writing, Springer, 1996 ▪ M. Alley: The Craft of Scientific Presentations, Springer, 2013
Learning materials	Presentation, lecture notes, teaching aids
Method(s) of instruction/ media being used	Interactive lecture, seminar
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	winter term
Which semester during the programme	1
Requirements for attendance, necessary knowledge	(Basic) Knowledge in scientific working.
Assessment (written/ oral test, paper, etc.)	course achievement: successful attendance with paper and presentation
ECTS credits	3
Work load in:	180 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 45 h of presence at university ▪ 135 h of self-study
Usability of this module	The module is of relevance for all other subjects requiring knowledge in scientific writing and communication. It can be used in undergraduate as well as in master courses. For courses with a teaching language other than English a translation might be necessary.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule

Module name	Intercultural Communication
Module number	BW.2.911
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Prof. Dr. Heiko Haase
Module content	The course "Intercultural Communication" is arranged decided interdisciplinary. The course covers besides cultural and communication-theoretical plus socio-scientific questions of intercultural action as well as aspects of international management and marketing. <u>structure:</u> 1. definition and models of communication 2. definition and models of culture 3. stereotype 4. culture-specific form of thought 5. verbal communication 6. non-verbal communication 7. culture-comparative studies 8. process of cultural assimilation
Learning objectives	The students understand essential culture-specific aspects of thinking, action and communication. The students are able to apply this knowledge in an intercultural context. They can analyse and evaluate culture-specific attitudes with a view to business communication and etiquette. As a result participants have the necessary intercultural skills to successfully build up business relationships in different economic regions of the world.
Course type (lecture, seminar, exercises, practical course)	0 L – 2 S – 0 E – 0 P

Module name	Business Administration Compulsory Optional Module
Module number	BW.2.912
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Professor of the Department of Business Administration or lecturers. The choice of the lecturer is in accordance with available capacities in the Department of Business Administration.
Module content	The teaching offer covers all business contents: investment and finance, marketing, accounting and controlling, taxes and auditing, personnel management and organisation, business informatics and economic law. This range is supplemented by special events such as founder seminars, corporate strategic planning simulations, international business, European integration, logistics, and innovation management.
Learning objectives	The students should be given the opportunity to broaden their business knowledge according to their personal interests. Every student has specific ideas of his later professional activity. It is therefore not appropriate to prescribe a concrete business module for students in the context of a specialisation. While one student sees its future in the founding of a company, the other intends to operate international as an employee in a large company. The training needs of students varies accordingly. The introduction of this "Business Administration Compulsory Optional Module" allows the students to choose a business module that best meets its needs.
Course type (lecture, seminar, exercises, practical course)	0 L – 2 S – 0 E – 0 P
Recommended literature	<ul style="list-style-type: none"> ▪ Topic oriented.
Learning materials	Lecture script, exercise papers

Module number	SciTec.2.201
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Prof. Dr. Ronny Gerbach
Module content	<ul style="list-style-type: none"> ▪ Repetition of basics of mechanical design and presentation of advanced and extended approaches for 3d design and modelling ▪ Design and construction of complex of precision instruments as well as optical and opto-mechanical systems ▪ Investigation of additional aspects in the product design (e.g. manufacturing and cost specific design, quality management during product design)
Learning objectives	With completion of the module, the students are able to name important relations during design and construction of precision and opto-mechanical systems and to explain their need for the product development. In addition, the students can design and model components and assemblies by means of 3D-CAD systems and can generate technical drawings and bill of materials.
Course type (lecture, seminar, exercises, practical course)	2 L – 0 S – 0 E – 2 P
Recommended literature	<ul style="list-style-type: none"> ▪ Pahl et. al.: Engineering Design, Springer Verlag 2007 ▪ Boothroyd et. al.: Product Design for Manufacture and Assembly, CRC Press, 2010 ▪ Pahl et. al.: Konstruktionslehre, Springer Verlag, 2007 ▪ Krause: Gerätekonstruktion in Feinwerktechnik und Elektronik, Fachbuchverlag Leipzig, 2000
Learning materials	Lecture notes, exercises, literature recommendations
Method(s) of instruction/ media being used	Lecture, practical course with computer
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	summer term
Which semester during the programme	2
Requirements for attendance, necessary knowledge	Technical mechanics and dynamics, basic principle of mechanical design and design engineering, knowledge of machine elements for mechanical and/or precision engineering
Assessment (written/ oral test, paper, etc.)	alternative examination course achievement: successful attendance of practical course
ECTS credits	6
Work load in:	180 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 60 h of presence at university ▪ 120 h of self-study
Usability of this module	modules regarding system engineering
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule
Language(s)	English

Department	SciTec
Degree programme	SI, WT
Module name	Precision Instrumentation
Module number	SciTec.2.204
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Prof. Dr. Martin Schröck
Module content	Introduction, classification with respect to other technological fields, function and structure of instruments, design development process, design principles, i.e.: functional separation, functional integration; accuracy enhancement by error minimisation, innocence principle, invariance principle, error compensation, adjustment; DOF in joints, degree of mobility, over determinacy and its effects; special bearings and guideways for precision instruments, drive units for precision devices, positioning systems, reliability of precision instruments
Learning objectives	After completion of the module the students are able to implement fundamental principles for the design of precision instruments as well as the rules to facilitate the accuracy of precision devices. They are enabled to perform the practical application of these rules. Furthermore they compare up-to-date elements and modules of precision instruments. Finally we evaluate possibilities to improve the reliability of precision devices.
Course type (lecture, seminar, exercises, practical course)	4 L – 0 S – 0 E – 0 P
Recommended literature	<ul style="list-style-type: none"> ▪ Blackburn, J. A.: Modern instrumentation for scientists and engineers, New York, Springer, 2001 ▪ Krause, W.: Konstruktionselemente der Feinmechanik, Hanser, 2004 ▪ Krause, W.: Gerätekonstruktion, Verlag Technik Berlin, 1986 ▪ Ringhardt, H.: Feinwerkelemente, Hanser, 1992
Learning materials	Lecture script, additional worksheets
Method(s) of instruction/ media being used	Lecture and applied project work
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	Summer term
Which semester during the programme	2
Requirements for attendance, necessary knowledge	Basic knowledge in design, engineering mechanics and mechanical components
Assessment (written/ oral test, paper, etc.)	written examination (90 minutes)
ECTS credits	6
Work load in:	180 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 60 h of presence at university ▪ 120 h of self-study
Usability of this module	All design-oriented modules.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule
Language(s)	English

Department	SciTec
Degree programme	SI, WT
Module name	Scientific Computing
Module number	GW.2.403
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Prof. Dr. Henning Kempka
Module content	<p>Fundamentals:</p> <ul style="list-style-type: none"> ▪ Matrix Analysis ▪ Condition and well posedness of problems ▪ Stability of numerical algorithms <p>Solving linear systems:</p> <ul style="list-style-type: none"> ▪ Gauss elimination method ▪ various factorizations ▪ iterative methods <p>Nonlinear equations:</p> <ul style="list-style-type: none"> ▪ Newton's method ▪ Fixed Point methods <p>Interpolation and Approximation:</p> <ul style="list-style-type: none"> ▪ Polynomial interpolation ▪ Least squares approximation <p>Differential equations:</p> <ul style="list-style-type: none"> ▪ Basics on ODE ▪ Numerical solutions of ODE ▪ Boundary value problems
Learning objectives	The students know the fundamental theories and algorithms of scientific computing. They are able to analyse, identify, formulate, and solve numerical problems and define the computing requirements appropriate to their solutions. They also get to know and are able to use current techniques, skills, and tools necessary for computing numerical problems.
Course type (lecture, seminar, exercises, practical course)	4 L – 0 S – 0 E – 2 P
Recommended literature	<ul style="list-style-type: none"> ▪ A. Quarteroni, R. Sacco, F. Saleri: Numerical Mathematics, Texts in applied mathematics 37, Springer. ▪ A. Quarteroni, F. Saleri, P. Gervasio: Scientific Computing with MATLAB and Octave, Texts in Computational Science and Engineering 2, Springer. ▪ H. P. Langtangen: A Primer on Scientific Programming with Python, Texts in Computational Science and Engineering 6, Springer.
Learning materials	Working sheets and self-created manuscript.
Method(s) of instruction/ media being used	Data projector, blackboard and computers in lab.
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	summer term
Which semester during the programme	2
Requirements for attendance, necessary knowledge	Successfully completed basic calculus courses thought during Bachelors studies.
Assessment (written/ oral test, paper, etc.)	written examination (90 minutes), course achievement: successful attendance of practical course
ECTS credits	6
Work load in:	180 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 90 h of presence at university ▪ 90 h of self-study
Usability of this module	-
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena

Time	According to schedule
Language(s)	English

Department	SciTec
Degree programme	SI
Module name	Introduction to Data Science and Machine Learning
Module number	GW.2.405
Study and Examination Regulations	ER-version 41 (16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Prof. Dr. Christina Claß
Module content	<p>Basic concepts of data science and machine learning are introduced:</p> <ul style="list-style-type: none"> ▪ Definition of data science, artificial intelligence, and machine learning ▪ Problem solving by searching and heuristics ▪ Learning ▪ Data preprocessing and exploration, Outliers, Bad data ▪ Classification ▪ Clustering ▪ Neural Networks, deep learning ▪ Model evaluation and improvements <p>The module contains a short revision in programming/introduction in Python and hands on exercises in Python.</p>
Learning objectives	<p>Upon successful completion of this module students are able to:</p> <ul style="list-style-type: none"> ▪ Sketch the fields of data science, artificial intelligence and machine learning ▪ Understand Data Science and Machine Learning as a process and describe the main steps ▪ Define the concept of learning and the terms supervised, unsupervised and reinforcement learning ▪ Preprocess and explore sample data and identify outliers ▪ Sketch and walk through basic search, classification and clustering algorithms ▪ Sketch a perceptron and basic learning algorithms ▪ Propose suitable algorithms for specific problem areas ▪ Define Type I and Type II errors and define and interpret different measures that describe the performance of different algorithms ▪ Interpret a contingency matrix and calculate measures ▪ Implement examples using Python, scikit-learn and TensorFlow
Course type (lecture, seminar, exercises, practical course)	1 L – 0 S – 1 E – 2 P
Recommended literature	<ul style="list-style-type: none"> ▪ Matthew Kirk, Thoughtful Machine Learning with Python, O'Reilly, 2017 ▪ Andreas C. Müller & Sarah Guido, Einführung in Machine Learning mit Python, O'Reilly, 2017 ▪ Ramon Wartala, Praxiseinstieg Deep Learning, O'Reilly, 2018 ▪ Pang-Ning Tan, Michael Steinbach, Anuj Karpatne, Vipin Kumar, Introduction to Data Mining, 2nd ed, Pearson, 2020
Learning materials	Slides, assignments sheets, Jupyter Notebooks, lecture videos
Method(s) of instruction/ media being used	Inverted / flipped classroom with Lectures on video, Jupyter Notebooks for interactive learning, theoretical and practical assignments
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	summer term
Which semester during the programme	2
Requirements for attendance, necessary knowledge	Basic knowledge of structured programming, preferably but not required in Python
Assessment (written/ oral test, paper, etc.)	written examination (90 minutes) course achievement: successful attendance of practical course
ECTS credits	6
Work load in:	180 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 60 h of presence at university ▪ 120 h of self-study
Usability of this module	Scientific instruments generate a large amount of data. This module

	conveys basic competences to interpret, assess, and learn from data.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule
Language(s)	English

Department	SciTec
Degree programme	OOVS, SI, WT
Module name	Soft Skills
Module number	SciTec.2.502
Study and Examination Regulations	ER-version 39 (of 23.07.2019) ER-version 41 (of 16.07.2021)
Compulsory/ required elective/ optional module	SI, WT: compulsory module OOVS: required elective module
Module coordinator	coordination by a professor of SciTec Department, lecturer with relevant professional experience
Module content	Often block course with seminars or workshops with following topics: <ul style="list-style-type: none"> ▪ project management ▪ rhetoric ▪ presentation techniques ▪ How to hold a conversation. ▪ How to effect negotiations. ▪ corporate strategic planning simulations
Learning objectives	After completion of this module the students obtain knowledge of relevant professional key skills in the field of: <ul style="list-style-type: none"> ▪ social competences especially ability to communicate ▪ interdisciplinary method competence.
Course type (lecture, seminar, exercises, practical course)	0 L – 2 S – 0 E – 0 P
Recommended literature	Belongs to the topic
Learning materials	Belongs to the topic
Method(s) of instruction/ media being used	Different instruction methods
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	summer term
Which semester during the programme	2 SI, OOVS 4 WT
Requirements for attendance, necessary knowledge	none
Assessment (written/ oral test, paper, etc.)	course achievement: paper or presentation (it belongs to the topic)
ECTS credits	3
Work load in:	90 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 30 h of presence at university ▪ 60 h of self-study
Usability of this module	The students can use the acquired abilities and knowledge for the master thesis and for their professional career.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena
Time	According to schedule
Language(s)	German/ English

Department	SciTec
Degree programme	SI
Module name	German as Foreign Language II
Module number	GW.2.178
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory optional module
Module coordinator	Michael Düring
Module content	Main topics: <ul style="list-style-type: none"> ▪ Information/ talk about people ▪ Describe daily routines, studies, leisure time activities ▪ Manage daily routines (post office, bank, phone calls, visit the doctor) Statements and discussions on distinctive cultural features of different countries including Germany
Learning objectives	Students learn to understand and use the German language in everyday situations. They obtain the ability to pronounce the German words in the right way, in order to make themselves understood in everyday life. They can use basic grammar structures. They are able to write short texts in German.
Course type (lecture, seminar, exercises, practical course)	0 L – 0 S – 4 E – 0 P
Recommended literature	<ul style="list-style-type: none"> ▪ Hueber - Verlag: Dreyer/ Schmidt „Lehr – und Übungsbuch der deutschen Grammatik“, ISBN 3-19-007255-8 ▪ Fabouda - Verlag: Lodevik „DHS & Studienvorbereitung (Deutsch als Fremdsprache für Studentinnen und Studenten)“ ISBN 3-930861-40-2 ▪ Klett - Verlag: „Pons - Großwörterbuch - Deutsch als Fremdsprache,“ ISBN 3-12-517043-5
Learning materials	Schubert - Verlag: „Begegnungen A2 – Deutsch als Fremdsprache“ ISBN – Lehr-und Arbeitsbuch: 978-3-929526-89-9
Method(s) of instruction/ media being used	Teacher-centred teaching and group work, work with audio-visual media, work (partially self-studies) in the media-pool (language department)
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	summer term
Which semester during the programme	2
Requirements for attendance, necessary knowledge	none
Assessment (written/ oral test, paper, etc.)	alternative examination
ECTS credits	3
Work load in:	90 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 60 h of presence at university ▪ 30 h of self-study
Usability of this module	Everyday life during the stay for studying Scientific Instrumentation.

Degree programme	SI
Module name	Research Internship
Module number	SciTec.2.625
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory module
Module coordinator	The respective academic supervisor and the internal mentor.
Module content	The student shall solve a particular task in a running research or development project in the fields of "Micro- and Nanotechnology", "Smart Materials and Sensors", "Scientific Computing", "Metrology and Analytics" or "Industrial Design". After a short introduction an overview of the state of the art has to be achieved and the student shall be familiar with the experimental equipment. Using scientific skills, the research problems have to be discussed and provided with possible solutions. The results have to be presented and explained in a scientific way.
Learning objectives	After completion of this module the students are able to apply the skills and knowledge acquired in the Master programme to the independent processing of a clearly defined scientific problem. The students can apply scientific skills to the presentation of the results. This presentation shall comply with the requirements of a scientific publication.
Course type (lecture, seminar, exercises, practical course)	5 months
Recommended literature	Topic oriented.
Learning materials	Topic oriented.
Method(s) of instruction/ media being used	Individual research work.
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	Winter term
Which semester during the programme	3
Requirements for attendance, necessary knowledge	Pass of all respective modules according to the examination order. Scientific principles for the topic from the relevant modules (semester 2).
Assessment (written/ oral test, paper, etc.)	alternative examination
ECTS credits	30
Work load in:	900 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 0 h of presence at university ▪ 900 h of self-study
Usability of this module	The acquired ability and knowledge can be used in the Master's thesis as well as in the professional life.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena, a research institute or an R+D department in industry.
Time	According to schedule
Language(s)	English/ German

Department	SciTec
Degree programme	SI
Module name	Master Thesis
Module number	SciTec.2.712
Study and Examination Regulations	ER-version 38 (of 21.03.2018), ER-version 39 (of 23.07.2019), ER-version 41 (of 16.07.2021)
Compulsory/ compulsory optional/ optional module	compulsory module
Module coordinator	The respective academic supervisor and the internal mentor.
Module content	The student shall process a subject-specific scientific task independently. The student will be supported by the respective academic supervisor and the internal mentor. Appropriate topics are from the fields of "Micro- and Nanotechnology", "Smart Materials and Sensors", "Scientific Computing", "Metrology and Analytics" and "Industrial Design". The work will include the investigation and presentation of the state of science, compilation of the theoretical principles, problem-oriented approaches and suggestions to solve the problem, independent development of alternative solutions, presentation and interpretation of the results of the work as well as their assessment and contextual evaluation.
Learning objectives	The students are introduced into the work as a scientist or engineer by scientific participation in research institutes or in industry.
Course type (lecture, seminar, exercises, practical course)	5 months
Recommended literature	<ul style="list-style-type: none"> ▪ The Master's Thesis shall comply with the directives according to the following DIN standards: DIN 1301, DIN 1338, DIN 1421, DIN 1422, DIN 1505, DIN 5478. ▪ Kate L. Turabian: A Manual for Writers of Research Papers, University of Chicago Press 2007 ▪ Wayne C. Booth, Gregory G. Colomb, Joseph M. Williams: The Craft of Research, University of Chicago Press 2008 ▪ Margaret Cargill, Patrick O'Connor: Writing Scientific Research Articles, Wiley-Blackwell 2013
Learning materials	Instructions for the Master's thesis, scientific literature, company notes.
Method(s) of instruction/ media being used	Individual research work on an assigned task with scientific methods.
Level/ category	Master (category: 2)
Which semester (winter/ summer term)	Summer term
Which semester during the programme	4
Requirements for attendance, necessary knowledge	Pass of all modules of semesters 1 to 3 according to the examination regulations. Scientific principles for the topic from the Research Internship and the relevant compulsory optional modules (semester 2).
Assessment (written/ oral test, paper, etc.)	alternative examination: Master thesis
ECTS credits	27
Work load in:	810 h of total work load, therefrom <ul style="list-style-type: none"> ▪ 0 h of presence at university ▪ 810 h of self-study
Usability of this module	The acquired competence and knowledge can be used in the professional career and they are the base for further qualification in research.
Frequency of offer	Every study year
Duration of module	1 semester
Place/ room	Ernst-Abbe-Hochschule Jena - University of Applied Sciences Jena, a research institute or an R+D department in industry.
Time	According to schedule
Language(s)	English, German

Department	SciTec
Degree programme	LOT, OOVs, SI, WT
Module name	Colloquium
Module number	SciTec.2.804
